HTG GREASE

HIGH TEMPERATURE LUBRICATION

DESCRIPTION

HTG GREASE represents a great advancement in high temperature grease technology. This multi-purpose grease provides exceptional service under a wide range of temperatures, pressures, moisture and adverse operating conditions. **HTG GREASE** will pump at low ambient temperatures and provide excellent lubrication at high bearing temperatures. The red color enables the operator to see at a glance where and when a part needs attention.

HTG GREASE is manufactured from the finest oils, thickeners, stabilizers, inhibitors and other additives coupled with modern manufacturing techniques and close attention to quality control. This provides the user with a superior grease of outstanding reliability which can result in substantially reduced maintenance costs, downtime and lubrication frequency.

Ball bearings, conveyer bearings, wheel bearings, roller bearings, plain bearings, in areas of high, low or ambient temperatures on any type of industrial equipment can be lubricated with **HTG GREASE**. Slides and glides on various equipment can also be lubricated. These greases can be applied by pressure systems, handguns, cups or just by hand. Vertical, horizontal or inclined areas, because of the tenacity and non-melt features of this grease, do not present any problems or require special procedures.

ADVANTAGES

HIGH TEMPERATURE PERFORMANCE - NON-MELTING
PUMPABILITY AT HIGH AND LOW TEMPERATURE
HIGH VISIBILITY - RED COLOR
EXCELLENT ADHESION - NO RUN OFF
EXCELLENT COHESION - NO SPATTER
THERMAL STABILITY - NO BREAK DOWN
OXIDATION RESISTANCE - NO THICKENING
EXCELLENT UTILITY - MANY APPLICATIONS
RELIABILITY - THOROUGHLY TESTED
ANTI-WEAR CHARACTERISTICS
EXCELLENT VALUE
500 + TEMPERATURE
